

Product brochure

Events, registration and gates for organisers and government agencies, owned outright.

Linked events at every level, QR tickets, and gates that keep scanning through a signal drop, with every booth selling through asasii pos. Bought once and owned outright.

Scans offline	Gates keep checking tickets when the signal drops.
Every level linked	State and district events roll up to the parent.
Booths on asasii pos	Cash, card and DuitNow QR at every booth.
Owned outright	No fee per ticket and no share of sales.

What it does

Events at every level

A state, district or kampung event links to a parent and takes its theme, branding, reporting codes and registration form. Every registration and booth sale rolls up to every level above it.

Linked events	A child event keeps its own date, venue, programme and budget, and takes the rest from its parent. Each child sets its own booths and fees, within head office fee limits. Theme, branding and reporting codes from the parent. Core registration fields locked, extra questions allowed. Requests to link, reviewed by the parent.
Rolled up across the tree	Counts include the parent and every event linked below it: events, registrations and booths, at every level.
Approvals by level and amount	A proposal and its budget lines go to the right approver automatically, by level and amount, with a target for the decision and the approval trail on record. Approve, or return with a note. Large budget changes after approval go one level up. Registration opens once the event is approved.
The calendar	A month view of every event at every level, coloured by level, with the events coming up in the next few weeks.
The budget	Allocated, approved and spent by level and by state, with booth fee income, spend by month and events over their approved budget flagged.

Registration and tickets

The organiser builds the form, the attendee signs in and chooses their days, and the QR ticket goes to the app and their email. Every channel counts against the same places.

The registration form	Fields, who fills each one, the type and whether it is required, with a live preview of what the attendee sees. Changes are published as a new version. Name and MyKad filled in from the national digital ID and locked. Age worked out from the MyKad date of birth. English and Bahasa Malaysia, picked on the first screen.
One count of places	Registrations on the event website, bulk uploads for groups and walk-ins at the gate all count against the event's places. A place held while the attendee finishes. Registration closes on a set date, or earlier when full.
The QR ticket	One QR for the days the attendee chose, in the app, on the event website or printed. It works at the gate without a signal. Attendees change their days or cancel. The event team resends or replaces a ticket. Free, or paid through FPX and DuitNow QR.
Consent on record	The consent text, the privacy notice version and each optional choice are recorded with every registration.
The attendee record	The ticket, check-ins and movement, sessions joined, booth receipts, the certificate and the consent record, on one page. MyKad numbers are masked.

Booths and vendors

Vendors apply with documents they upload once, the organiser offers a booth, and approval creates the vendor's asasii pos outlet with the booth number and the menu.

The floor plan	Booths in zones, each with a size, a fee, power and water, and its state: free, booked or trading. The layout is edited, then published as a new version. Zones and prices. Fee rules by vendor type, applied on approval. Move a vendor or change the power from the booth.
Applications and documents	Vendors upload their documents once and reuse them in every application until they expire. The organiser checks them the first time, against the SSM and halal registers where possible. Approve and offer a booth, or return for changes. A reminder before a document expires. One vendor registry for every level.
An asasii pos outlet for every booth	Approval creates the vendor's asasii pos outlet with the booth number, the menu and the prices from the application. The vendor sells on a terminal lent by the organiser or on their own Android tablet.
Vendors on site	Each booth's opening time, till status and sales today, live from asasii pos, with issues flagged and one message to every vendor.
The vendor console	Each vendor sees sales by hour, item and payment type, the menu and stock, the payouts and the team's till logins.

Gates and check-in

Door staff scan the ticket QR or key the MyKad number and get a green tick, the name and the age group. When the signal drops, scanners keep checking tickets on the device and upload when the

network is back.

Scan and let in	A green tick, the name and the age group, then the next person. Door staff scan the ticket QR, or key the MyKad number, on the door staff app. A gate can be kept for one group, such as VIP guests. Door staff scan at their assigned gates, with no access to attendee records.
Offline at the gate	Scanners keep checking tickets on the device against the last ticket list and hold the scans. They upload when the network is back, and duplicate tickets are flagged on upload.
Walk-ins	Walk-ins register at the gate with MyKad, with consent read out and recorded. The record is saved on the phone until the signal returns.
Zones and sessions	Door scans at halls and zones record who joined which session, and how many people are inside each zone against its capacity.
Every gate, live	Entries by gate and by hour, each scanner's staff, battery and last sync, and the offline queue, on the event console.

The attendee app

The attendee app holds the ticket, shows the day's agenda and the organiser's announcements, finds booths and issues the certificate afterwards. On the event website, attendees find events, register and keep their tickets.

Today and the ticket	One QR ticket for the days chosen, which works without a signal. Today's agenda and saved sessions, the organiser's alerts, and quick links to the map, booths, programme and help.
Announcements	The event team sends to attendees, vendors or door staff, narrowed to a group such as those checked in today, in each person's own language. Push to the app, and SMS to those without it. The SMS cost shown before sending. A test sent to yourself first.
The programme	The run of show by day and by stage, with each change published to the app.
The map and the booths	The site map with the stages, gates, services and booth zones, and a booth finder by zone and type. Every booth takes cash, card or DuitNow QR.
The certificate	The certificate arrives in the app once the attendance and feedback rules are met, as a PDF with a QR anyone can scan to check it.

Reporting and settlement

Booth sales settle in one batch per channel per night, beside booth fees, budget against spend and attendance from gate scans. The close-out report fills live while the event runs.

Money	Booth fees collected and outstanding, booth sales by payment type, and budget against spend for every budget line. Booth fees paid by FPX or DuitNow QR before opening. An export for finance.
Settlement	Card and DuitNow QR sales settle to each vendor's bank account in one batch per channel per night, with gross, fees and net. Cash stays with the vendor. Late offline sales settle in a batch of their own. A test payout confirms each vendor's account before the event.
The close-out report	Drafted when the gates open and filled live from the gates, asasii pos and incidents. It goes up the chain for approval and downloads as a PDF.
Reach and targets	Participants by age band, gender, state and level, counted from check-ins rather than registrations, with targets against actual. PDF and Excel exports. A monthly schedule.
Finance export and the API	Approved budgets, booth fee income and vendor payouts go to the finance system in a nightly file. A documented API with scoped keys serves dashboards and reconciliation.

Who it's for

Head office	Every event at every level in one record, proposals routed by level and amount, the budget by level and state, one vendor registry, and reach reports counted from check-ins.
The event team	A live view of the day, the run of show, registrations, gates and door staff, the booth floor, incidents, announcements, certificates and the close-out report, for the event lead and the team on site.
Vendors and exhibitors	One vendor account for every event: find events, apply with documents uploaded once, pay the booth fee online, and sell through asasii pos with sales, stock and payouts in the vendor console.
Attendees	Find events by level, state and date, register with the national digital ID, keep the QR ticket on the phone or printed, find booths and the map on the day, and download the certificate afterwards.

An event on asasii events

Weeks before Approved and listed	The proposal is approved at the right level and the event goes on the event website.
Registration open Attendees register	They sign in, choose their days, agree to the privacy notice and get a QR ticket.
Before the event Booths approved	Each approved vendor gets a booth and an asasii pos outlet with its own menu.
Gates open The first scans	Door staff scan QR tickets, and walk-ins register at the gate.

Mid-morning A gate loses signal	Scanners keep checking tickets on the device and upload when the network is back.
Afternoon A session moves	The change goes to the app by push, and by SMS to those without it.
Every night Settlement	Card and DuitNow QR sales settle to each vendor's account. Cash stays with the vendor.
After the event Close-out	Late offline sales settle, finance reconciles fees and payouts, and the close-out report goes up for approval.

A licence, not a fee on every ticket

The organiser buys an events platform and keeps everything it produces. idataraya is paid to build, customise and maintain it.

	A ticketing platform	asasii events
Who owns the software	The platform; access ends with the contract	The organiser, outright
Where attendee data lives	The platform's cloud	The organiser's own environment
Ticket and booth fee payments	The platform's gateway and its rate	FPX and DuitNow QR into the organiser's own account
Booth sales	A separate system, or none	Every booth on asasii pos, settled to the vendor
What it costs	A fee per ticket or per attendee	A system, plus a yearly fee with defined response times

Security and Malaysian compliance

PDPA 2010	Consent is recorded at registration, with the notice version and each choice.
MyKad masked	MyKad numbers are masked on screen and in exports.
Single sign-on and MFA	On every console, with the organiser's identity provider.
Roles by level	Each office sees its own events and those below, and door staff cannot open attendee records.
Audit trail	Every change and every view of personal data, kept for seven years.
Your own environment	Attendee data stays in the organiser's own data centre or cloud account.

Services

Rollout plan and proposal	Send the events you run in a year, the expected attendance and how booths work today. An engineer replies with a rollout plan, a device list for the gates and booths, and a proposal.
Installation in your environment	asasii events runs in the organiser's own data centre or cloud account. idataraya installs it, hardens it and keeps it current, and the organiser's team holds the keys, the backups and the data.
Support and maintenance	One team looks after the platform for the life of the agreement. Severity-based response times, measured monthly. Continuous monitoring from within the organiser's environment. A drilled backup and restore. Software updates and the customisations made for you.
The yearly agreement	Software updates, the customisations made for you, monitoring, and severity-based response and restoration targets. Hosting stays with you. It is a fee, not a share of ticket or booth sales.

Talk to our team

Send us the events you run in a year, the expected attendance and how booths work today. An engineer replies with a rollout plan, a device list and a proposal.
